

# 3RCI WiFi Link

## 3RCI

### Wireless WiFi Link

The GKD 3RCI WiFi module can be added to any Version 8 3RCI system, requiring only a software and firmware upgrade to the 3RCI display.

### How 3RCI WiFi Link Works

The module creates a local WiFi hotspot and can be connected over WiFi to any Internet enabled device with WiFi capability. This includes smartphones, tablets and laptops.

The WiFi module pulls information from the 3RCI display and broadcasts it over the WiFi link.

The information is updated every five seconds, and includes:

- Height and radius values for the machine
- Current load on hook
- Current rated capacity
- % of capacity currently used
- Height limit
- Slew limit
- Virtual wall status
- Tandem lift status
- Foreman's key switch status
